Autodesk is just doing what all the other big players (such as Autodesk software) do. They are protecting their business through copy protection technology, and their only alternative is to license their software on a non-free model. Software piracy is always going to be a problem. So this is an attempt to work around the problem. The only hope of keeping Autodesk from using copy protection is to find a way to get Autocad open source, and give back to the software developers so that they may benefit from the great work that they have put in to developing a great tool.
